Saminu Salisu
Front - End Web Developer.

London NW4
s.salisu@live.co.uk - (+44) 07415197423

I am a Middle Weight Front -End Developer specialising in creating beautiful and functional tools for different devices. I have a strong background in Graphic Design and Animation (Images and Vectors) and also possess Back-End Developer skills with the MEAN platform (Mongo, Express, AngularJS & NodeJS). I can work on a complete projects from conception to completion independently or as part of a team with the use of clean and well-structured hand coding.
Willing to relocate: Anywhere

WORK EXPERIENCE

Front-End Developer
Quiddi-Hub Ltd - London - March 2014 to Present

Responsibilities
Working with an in-house Backend Developer and several off-site teams to build the next version of a successful financial platform offering loans, mortgages and price comparison services. Some of my telling impact was the redevelopments of QuiddiHub Websites about 32+ with emphasis on Mobile first Responsive and Clean Hand Coded Websites. The redevelopment saw an increase in conversion rate from 15% to 75% and still counting with continues improvement being carried out on the websites. Using tools like AngularJS, LESS and Bootstrap, working in an agile workflow environment and regular deployment process using continues integration tools like Jenkins and Git version control to manage workload and reduce technical cost and time drastically.

Accomplishments
• Developed the first responsive table listing around as of the time for the QuiddiCompare Comparison site with collaboration from Senior Full stack Developers. My job involved redeveloping the site with old style and theme around a clean responsive website with Hand Coded Codes and optimised vector images and SVG's for fast response. Tools used include: Bootstrap, AngularJS, Less, JQuery, Illustrator and Photoshop.

• Built a fantastic relationship with the Senior Full Stack Developer and Marketing Team to maintain the websites and continue to build new ones with little or no supervision.
• Occasionally creating mock-ups and web prototype in vector format using tools such as Illustrator and Sketch and building interactive site component such as sliders that give amazing feedback with Hand Coded mobile optimised design flow.

Skills Used
• HTML, HTML5 (Clean Hand Coded)
• CSS
• JavaScript
• Html frameworks (Bootstrap, Foundation)
• CSS compilers (LESS, SASS)
• JavaScript frameworks (AngularJS, JQuery)
• Databases (Mongo DB, SQL)
• Server Side (NodeJS, Express JS)

- Debugging tools (Chrome Dev tools, firebug etc)
- Adobe Creative Suite
- Photoshop
- Illustrator
- Git Version Control
- CMS (Word Press)
- Sketch

Stadium Vision Digital Developer

DNC Wembley - London - January 2012 to March 2014

• Solely responsible as an in-house developer for building the first and only stadium vision event day POS content delivery system, with overlapping displays showing multiple dynamic and static digital flash content viewed by over 90,000 spectators and football fans weekly for Wembley National Stadium, the first of its kind across cover 490 display screens for DNC, FA Group & Wembley National Stadium. I was able to build professional rapports with the DNC Head of Concessions, Hospitality Manager, Club Wembley Manager and FA Group Information Technology department to manage Brand Guidelines from stadium sponsors and the Wembley stadium as the Client.
• Some of the Skills Used in this Role include but not limited to Hand Coding Digital Content in Html/Html5, XML, JavaScript, Actioscript 2.0/3.0 OOP, with Sublime 2.0, Adobe Flash CC, Dreamweaver CC Deployed for TV, Desktop and Mobile adopting responsive designs. Also built Vector, Image and Video Graphic content using Illustrator, Photoshop, Fireworks, After-Effect, and Adobe Premier Pro.

THE USE OF BIG DATA IN THE FIELD OF DIGITAL FORENSICS INVESTIGATIONS (COMPARATIVE STUDY BETWEEN DIGITAL FORENSICS IN UK AND NIGERIA)
http://www.ijntse.com/upload/1445667976SP-OC104.pdf
15 October 2015
The growing reliance on digital devices has increased data created and stored on daily
basis around the world exponentially, with more and more data analyst keeping logs about what
data is stored and how the data is used, it is becoming a big challenge for digital investigators to
process large amounts of data easily.
This paper would take a closer look into the challenges of using big data in the filed of digital
forensics investigation, the study further suggests alternative ways to process large amounts of
data effectively with the use of open source techniques and tools.
